ELI-ZERO+

The New A to B

Efficiency is The New Speed

A platform system built from the ground up to deliver unparalleled energy efficiency as well as high performance. Optimized kinetic conversion and control produces extended range, high torque and smooth accelerations.

45 km/h

Top Speed*

*45km/h is the top street legal speed for L6e in EU countries

Built for Daily Commutes

Ei1 ZERO delivers a category-defining driving experience, optimized for urban trips and short commutes.

The conveniently compact 2-seater is designed to hop-in and go, and to make daily trips easy and fun.

100 km

Max Range*

*100 km is the maximum range of Ei1 ZERO Plus on a single charge under optimum driving condition. For more info, please check specifications.

2.5h+

2.5 hrs to a full charge from a Level-2 outlet

5h+

Charge From Any outlet at ~16km/hr

Lithium Battery

Advanced Lithium battery cells power Eli ZERO's automotive-grade RESS system. At 3 times the energy density compared to lead-acid batteries.

Battery Heating System

Optional battery heating system significantly enhances overall battery performance in winter time and in cold climates.

Brake and Energy Recovery

Responsive BERS improves vehicle maneuvering and driver's safety during braking. The system automatically recollects energy under deceleration, to improve energy efficiency and range.

Power-assisted Steering *

Additional steering motor, control module, and the angle and torque sensor work in unison to provide smoother and easier turning and handling.

Power-assisted Brake *

A vacuum booster and the electromagnetic braking work in combination to brake more easily and shorten the stopping distance.

*Power Steering and Brake are optional features

Keyless Start
Built-in keyless entry and start system

Simplified Control
Simple, intuitive and easy to use

Rear View Camera
Back-up camera and radar

A Headlight That Turns Heads

State-of-the-art LED headlights and indicators seamlessly integrate into the vehicle design. Interact with the user when approaching or unlocking, during charging or while driving.

Running

Breathing

Dual Beam

Sunroof

Let the light in and feel the breeze with Eli ZERO's sunroof, comes standard in each model.

Proudly Aluminum

The high-tensile aluminum frame improves Eli ZERO's range, while providing a light and agile experience on the road.

Party of 2+ More

The two-seater comes with additional storage space to hold up to two carry-ons. Pack your groceries, gym bag, and a friend!

Interior

Spacious and streamlined, with an expanded viewing angle and leg-room thanks to the compact design.

Heat & Cool AC

Customized to integrate into the compact interior, with standard heating, cooling and windshield Defogging.

Storage

160L of trunk space. Also equipped with a magazine holder, a cupholder and a glovebox with USB charging ports.

A New Lifestyle and a New Urban Topology

We believe that personal transportation should be simpler, friendlier, more agile and less intrusive. Vehicles of tomorrow should enhance social engagements instead of suppressing them. We created our flagship vehicle, Eli ZERO, to fundamentally shift how people engage with modern communities and urban environments.

Eli ZERO is designed to prioritize maneuverability on urban streets as opposed to highway performance, making short trips effortless and fun. We believe **local connectivity** is the key to stimulate a healthier urban model. Improved walkability and reduced car dependency empower **human-scale** neighborhoods. Ease of access to shops, events and facilities stimulates local economy.

Besides zero emission, energy consumption of Eli ZERO is **less than 7%** of a conventional automobile, making it one of the most energy-efficient electric vehicles ever built. Low Energy Consumption reduces environmental impact, improves air quality, and saves costs.

ZERO's entire vehicle body is made of **highly recyclable** material of PP and aluminum to minimize environmental impact. Our environmentally conscious manufacturing process reduces our carbon footprint.

70% smaller than a sedan, 50% smaller than a Mini, Eli ZERO is designed to minimize street and parking footprint. Private cars are unused 95% of time and take up as much of a footprint as an elephant. Minimized vehicle footprint effectively reduces congestion and waste of valuable urban space.
